PROFESSIONAL SUMMARY

GenAI Engineer with 2+ years of experience in machine learning, deep learning, and LLM applications. Skilled in designing and deploying end-to-end AI pipelines using RAG, MCP, vector databases and context-aware systems. Experienced in building scalable solutions such as intelligent chatbots, multi-agent architectures. Proficient in Python, NLP, and Azure AI services, with a strong focus on developing reliable AI systems that reduce hallucinations and deliver real-world impact.

SKILLS

- Gen Ai & NLP** — Document Processing, LangChain, RAG Pipeline, MCP, Retrieval Techniques, Vector Databases, LLM Architectures, LLMs, Sequential Data Processing, Sentiment Analysis, Word Embeddings, Transformers.
- Machine Learning** — Supervised & Unsupervised Learning, Regression and Classification Algorithms, Dimensionality Reduction, Random Forest, Ensemble Methods, Model Evaluation Metrics (Accuracy, Precision, Recall, MAE, MSE)
- Deep Learning** — ANN, CNN, Activation Functions, Optimizers, Regularization , Backpropagation, Hyperparameter Tuning, Image Classification, Object Detection, Feature Extraction, Transfer Learning , Data Augmentation, Convolutional Layers,
- Data Processing** — Pandas, NumPy, Data Cleaning, Feature Engineering
- Languages & Tools** — Python, SQL, Power BI, Git and Github, Azure Services, Flask, Docker

PROFESSIONAL EXPERIENCE

Jr. Software Developer - AI/ML

Relay Human Cloud India | Jan 2026 – Present

- Engineered an MCP + RAG-based intelligent chatbot leveraging vector databases and LLM reasoning to deliver highly accurate, context-aware responses while minimizing hallucinations.
- Designed a scalable multi-agent AI interview system using Azure AI and RAG for context-aware question generation and automated candidate evaluation.
- Developed a multilingual document intelligence system using LLM pipelines for translation, summarization, and cross-document analysis with structured outputs.
- Automated resume standardization pipeline using Azure AI Agents, transforming resumes from diverse formats into a consistent structured schema, improving downstream processing and usability.

Senior Associate

Wipro-Hyderabad | Jun 2022 - Dec 2024

- Built an AI-driven marketing content generation pipeline using SERPAPI and LLMs to automate real-time trend analysis and scalable content creation.
- Built robust data pipelines for information collection, preprocessing, and cleaning from multiple structured and unstructured sources, ensuring high-quality inputs for model performance.
- Worked on computer vision data annotation for autonomous driving systems, labeling images and videos with high precision across objects, lanes, traffic signs, and pedestrians to support model training.
- Collaborated across teams to deploy and optimize ML-driven solutions, ensuring scalability, reliability, and performance in production environments.

COURSES

04/2025 – 10/2025
Hyderabad

Gen Ai and Data Science

Innomatics Research Labs

Completed hands-on training in Generative AI, focusing on LLM architectures, RAG pipelines, prompt engineering, and vector search
Developed real-world applications including intelligent chatbots, document intelligence systems, and multi-agent workflows
Gained experience in end-to-end GenAI system design, from data ingestion and embeddings to retrieval optimization and response generation

EDUCATION

2024

MBA

Sree Chaitanya Institute of Technological Sciences

2020

Bsc, computers

PMR degree college
